

# Droid Vocalizer 3.0

JHighlandMade.com

## **Power:**

Please use USB-C power when possible. The Vocalizer will drain the 4x AAA batteries quickly

## **On/Off Switch:**

Any Single Pole Single Throw (SPST) latching switch will work

## **Reset:**

Pressing down the reset button for 5 seconds while the vocalizer is on will reset all of the WIFI settings.  
Please use the included tool or a small pin to press the recessed button

## **Status Lights:**

Green - booting

Blue - connected to wifi

Red - sound playing

## **Audio:**

Stereo = 3.5mm, DAC compatible

Mono = supports 3W 4Ω speaker (included)

## **Event Trigger:**

Fires when a sound is played. Can be used to trigger a servo or other devices

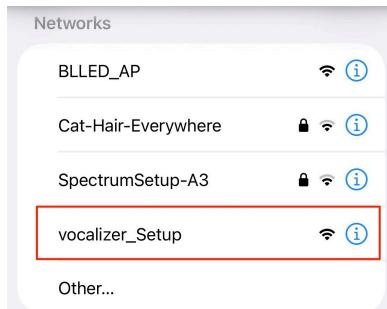

Pin out = signal / +5V / GND

## **+5V out Always on:**

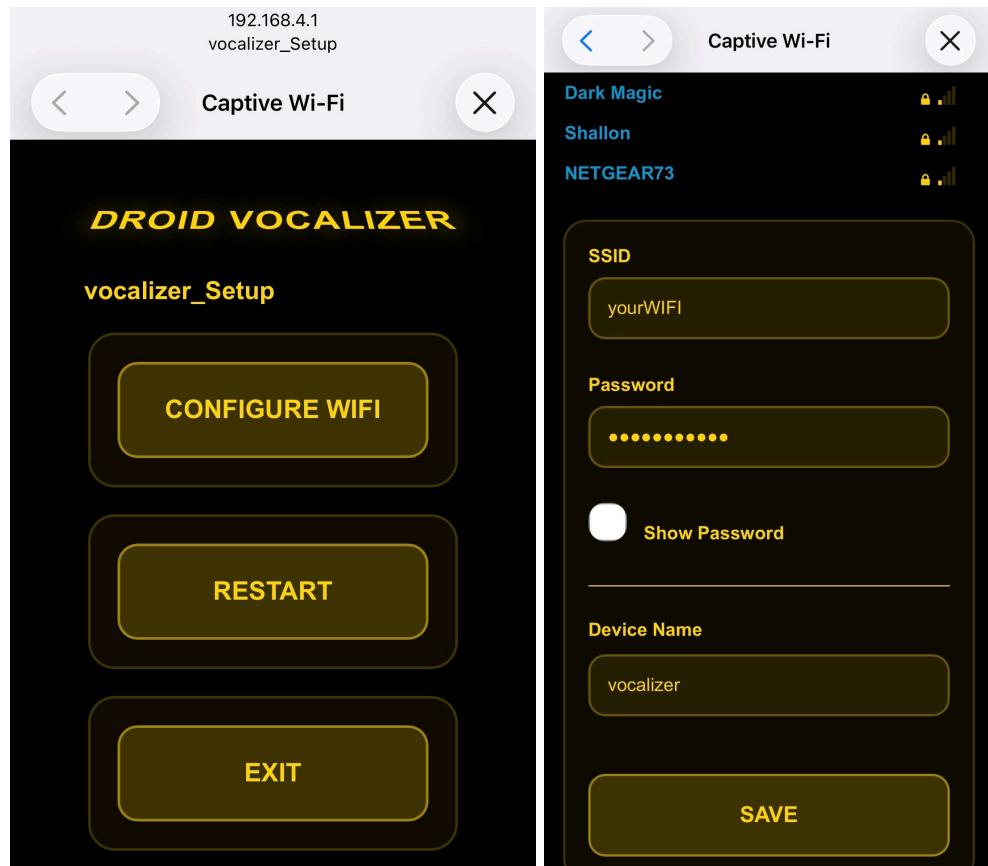

This jack delivers constant 5V power when the Vocalizer is powered on. This is great for powering LEDs and other electronics (Example: K-2SO LED Lego / Back Panel lights)

## Configuration:

When you boot up the Vocalizer for the first time, go to your devices wifi settings and find “vocalizer\_setup”

Select “Configure WIFI”

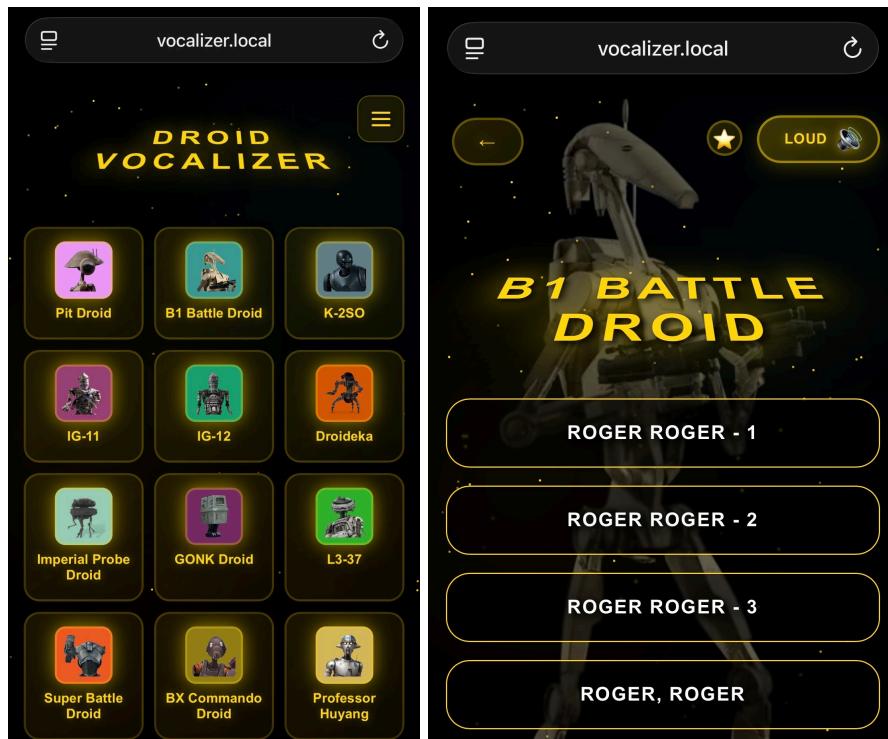

Click on your WIFI network name from the list and enter your WIFI password.  
Pick a name for your vocalizer. The default is “vocalizer” **REMEMBER THIS NAME!**

Once the WIFI is configured and your Vocalizer box has a Blue status light (connected to wifi), you are ready to make your droid talk!

Navigate in a browser to <http://vocalizer.local>. If you renamed your vocalizer, it will be <http://name.local>

You should see the vocalizer dashboard. Click into one of the droids and press a sound button. The droid should say the phrase through the Vocalizer speaker

**DroidVocalizer.com** is a tool that will help you quickly connect to your droid. You can also create a QR code image, and a printable QR code that will take you to the Vocalizer dashboard
